MTI Vertical Universal Mixer Uni tec®

The all-rounder definitely the right solution

MTI presents the **Uni tec®** as a universal mixer of the latest generation: individually configurable, for manual and automatic controlled processes and always with the highest mixing precision.

Regardless whether you are looking for a mixing plant to homogenize bulk materials with different raw material characteristics or you have to reproduce complex process sequences to realize specific product parameters

the **Uni itec®** matches your requirements.

Exact results by process optimization

Besides a most convenient operation and excellent cleaning properties, the main focus was put on process safety during the development of the **Uni tec®**.

The geometric design of mixing vessel, mixing tools and optional chopper systems is optimally adjusted to the specific needs of the chemical and plastics processing industry as well as similar branches and can be varied in a wide range. The mixer both offers gentle homogenization of sensitive educts and dispersing of cohesive pigments. Due to further configurations such as spraying systems for liquids, double jackets for temperature controlled process management and vacuum or pressure-resistant vessel designs also coating and granulating processes can be reproduced in highest quality.

Besides complying with all valid regulations, of course, MTI also considers ATEX, if necessary due to raw material properties. The control system of the

Uni tec® as well as the installed safety equipment meet all requirements of a modern and flexible production facility with highest process safety.

A conventional mixer might be okay. The **Uni tec®** made by MTI, however sets standards for your products of tomorrow.

Find out for yourself with a visit at the Powtech trade fair held from 23-25 April in Nuremberg at our booth in **Hall 1 / Stand 1-154**.

We would be pleased to meet you.
